LGW...A2, LGW...A2-7

- RoHS II 2011/65/EU

Technical description

The differential pressure switches LGW...A2... are adjustable differential pressure switches as per EN 1854 for automatic burner controls.

Suitable for switching a circuit on, off or over on changes in actual pressure value relative to the set reference value.

The reference value (switching point) is adjusted on a setting wheel provided with a scale. On LGW...A2P: test button integrated in lower part as standard.

Application

Differential pressure monitoring in firing, ventilation and air-conditioning systems. Suitable for air, flue and exhaust gases and other non-aggressive gases as differential pressure switches; not suitable for industrial combustion gases.

Approvals

EC type testing certificate as per:

- EC-Gas Appliances Regulation
- EC-Pressure Equipment Directive

Pressure switch class "S" as per EN 1854.

Special designs for the North American market with U_L, FM and CSA registrations.

Approvals in other important gas-consuming countries.

Functional description

Differential pressure switch in pressure and vacuum range. The differential pressure acts via the diaphragm against the force of the setting spring on the microswitch. The pressure switch operates without auxiliary power.

Differential pressure switch

The control unit responds to differential pressure. If the set reference value (mbar) is exceeded or undershot, the circuit is switched on, off or over.

LGW...A2P test button

The LGW...A2P differential pressure switch is equipped with a test button. The test button permits a service-friendly check of the safety function. If the test key is pressed while the pressure exists, the connection to the pressure connection **G 1/4** is interrupted and the pressure under the diaphragm is released. The microswitch of the pressure switch changes the contact position from NO to NC. If the test button is released, the pressure below the diaphragms is built up again and the microswitch changes to its original position.

Switching function

As pressure rises:

1 NC opens, 2 NO closes

As pressure falls:

1 NC closes, 2 NO opens

Definition of switching difference Δp

The switching difference Δp is the pressure difference between the upper and lower switching pressures.

Dimensions [mm] LGW...A2, LGW...A2-7

LGW...A2P

Pressure connection (+) $\varnothing 4.6$ can only be used as test nipple. Pressure connection only possible using G 1/4.

G 1/4, tapered

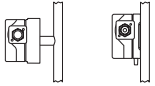

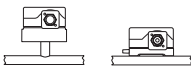

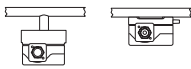

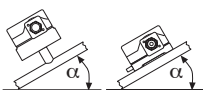

- A 2.5 dia for equipment plug as per DIN EN 175 301-803
- B Oblong slot: 0.8 and cross-head as per DIN 7962-Z 2
- 1 Pressure connection (+)
- 2 Pressure connection (-)
- 3 Only LGW... A2 optional pressure connection (+)
- 4 Test button p (+)
