

### MAIN FEATURES

∅ 80 encoder series recommended in feedback control systems on AC servomotors. They include a traditional incremental encoder and commutation signals (Hall effect phases).

- Easy mechanical mounting
- Small dimensions
- Wide range of resolutions available
- High temperature resistance

#### EL series

Basic version with 3 channels incremental outputs. Several output types available

#### EF series

6 channels encoder with optical generation of "Hall effect phases" (commutation signals)  
Signal transmission by bit parallel bus
