MISCELLANEOUS

Efficient cargo handling starts off with

- A** Low wear and shock-resistant nylon 6.6 wheel
- B** Maintenance free, sealed precision ball bearing for low rolling effort
- C** Plastic sealing cap drains water in an efficient way and prevents corrosion
- D** Integrated bushing/threadguard for a very efficient sealing
- E** Robust pressed-steel fork with anti corrosion coating
- F** Effective labyrinth-seal for maintenance free swivelling motion

- Standard cargo castor

Air cargo handling is of paramount importance in today's world, requiring efficiency, reliability and speed even under high loads and extreme weather conditions. That is where Colson Cargo Castors play a major role.

COLSON CARGO CASTORS: RELIABILITY TURNS ON QUALITY

The quality of Colson Cargo Castors is based on a combination of:

- **precise and innovative design**
- **quality of materials**
- **quality of manufacturing**

End results: a Colson castor with a load capacity of 250 kg, with a high resistance to shock loads and a long service life. The precision ball bearings in both wheel and swivelhead secure a low rolling- and swivelling effort, enabling easy manoeuvring of the freight on loaderdecks. Newly developed seals for wheel and fork guarantee maintenance freecastors. To prevent corrosion, the electrolytically zinc plated castor is given an additional yellow passivated coating.

- Standard cargo castor with integrated toe-guard

FIELD TESTS

After lengthy laboratory testing on service-life, maximum load capacity, shock resistance and rolling and swivelling effort, Colson products are submitted to severe field tests for a period of at least six months. These tests include various types of Ground Support Equipment, in various countries and under all types of weather conditions. It is not until the products have passed all these tests that they are released for volume production and marketing.

It is therefore that Colson Cargo Castors prove their reliability 24 hours per day, every day.

- MOBRA - standard cargo castor with toe-guard fixed in mounting bracket

- CargoDisk® cargo castor with low building height

- MOBRA – cargo castor with toe-guard fixed in mounting bracket

MOBRA

The product consists of a mounting bracket that incorporates a standard toe-guarded cargo castor. The advantages for the fabricators and users of sorting decks, are numerous:

- **New sorting decks only require an upper deck.**
The lower deck, normally used for mounting the castors, becomes superfluous.
- **Simplifies mounting.**
MOBRA doesn't need bolts and nuts.
- **No hassle of replacing damaged castors.**
Just take them out and push a new one into the standardized holes of the upper deck.
- **Procurement and logistics are simplified.**
This new patented MOBRA unit makes air cargo handling more cost efficient and reduces maintenance cost considerably.

- Sorting deck mounted with the MOBRA

- CargoDisc®

CargoDisc®

The latest development in our range of cargo castors is the CargoDisc®. Additional to the same advantages of the MOBRA, easier and more economically mounting and maintenance, is the overall low building height. There is no more space needed than the 58 mm wheel diameter, to build in this product into your GSE equipment. Specially engineered for applications like high loaders, dollies and those parts within air cargo centers where a low building height is demanded.

1 inch = 25.4 mm 1 pound (Lbs) = 0,45 kg

* Mounting bracket (MOBRA) needs a hole in the sorting deck of at least 146,5 mm, maximum 147,5 mm.

- Notes:
- Temperature range - 30°C to + 80°C. (-20°F to +180°F)
 - For temperatures below - 30°C (-20°F) please contact Colson
 - Overall dimensions interchangeable with most current types of cargo castors
 - Cargo castor to be mounted on a flat and solid mounting surface
 - Mounting bracket (MOBRA) is patented: NL-patent 1018366
